The online counterfeit economy: consumer electronics
The digital world is filled with various ways for counterfeiters to attack your brand and turn a profit for themselves, all while under the cloak of anonymity. Online marketplaces, social media, rogue websites, fraudulent mobile apps, the “Dark Web” — they all foster a world of ways to process illicit sales, providing counterfeiters with more tools at their disposal than ever before.

By the numbers, today’s largest counterfeit markets in the fast-moving consumer goods sector are pharmaceuticals, consumer electronics, and food and drink. Here, we take a closer look at counterfeiting in the consumer electronics industry and what it means for your business.
As more and more consumers around the world become connected through the digital marketplace, it is becoming increasingly easier for cyber criminals to counterfeit consumer electronics. The demand is there—the industry is predicted to grow to some US$3 trillion by 2020—and with complex supply chains and reliance on manufacturing across Asia, so too, is the capacity to supply.

Currently, it’s estimated that one in every 10 IT products sold worldwide may be counterfeit. In some cases, fake components infiltrate supply chains and end up being sold by legitimate retailers, making it even harder to tell the genuine products from the fakes. Fraudsters and grey market profiteers, naturally, see the vulnerability, and seize the opportunity to turn a profit at the brand owners’ and consumers’ expense.

About 64% of counterfeit electronics sales in the U.S. take place through legitimate retailers, and the telecommunications industry is particularly susceptible, due to increasing levels of consumer demand. Apple handsets, for example, are one of the most targeted goods; fake phones are conservatively estimated as a $6 billion industry, while 148 million of all mobile devices sold worldwide in 2013 were substandard or counterfeits.

The shroud of online retail makes it even easier for counterfeiters to sell their goods, without giving the consumer the ability to see them in person or know for sure if they’re coming from a trusted source. The ease of online purchasing also acts as an enabler: online retailers account for 60% of fake electrical goods in the UK, and 7% of consumers bought counterfeit electronics via social media alone in 2016.

The statistics are staggering. But the risks and threats—to both a company’s brand and the consumer at large—are equally terrifying. For a brand, revenues are held at higher risk and prices escalate as a result of these counterfeit products. Faulty, substandard goods mean brand denigration, which in turn impacts sales. For consumers, there are serious safety risks. Even though consumers seem more comfortable knowingly buying fake goods (around 8% of people in the UK have knowingly bought counterfeit electronics; around 12% in the US), they are likely unaware that these fakes are not put through the same rigorous health, safety, and quality checks as their legitimate counterparts. That’s when we see the not-so-extraordinary cases of exploding smartphone batteries and blenders bursting into flames. These days, consumer electronics manufacturers are even creating mobile apps to check things like cable authenticity as this becomes a day-to-day danger.

Unfortunately, consumers continue to take the “it won’t happen to me” approach to fakes. In fact, nearly one-tenth of consumers would consider buying fake electrical goods if it was cheaper than the original. Additionally, according to a U.S. study, 45% of consumers believe that counterfeit consumer electronics do the job just as well as genuine consumer electronics—this highlights that consumer knowledge around health and safety checks is still too low. And with China serving as the main source of counterfeit electronics, counterfeit consumer electronics is a global issue, and not just one relegated to the Western world.
Consumer electronics facts

$169 BILLION
Electronics counterfeiting is a $169 billion industry worldwide. It's estimated that one in 10 IT products sold worldwide are counterfeit.

148 MILLION
Consumer electronics is pegged as the fastest growing category of counterfeited goods across the world.

Most faked items:
- Smart phones
- Computers
- Tablets
- DVD/music players

Fake phones are now a $6 billion industry. The average counterfeit phone sells for around $45.

In 2013, 68% of electronics and parts seized originated from China.

68%
In 2013, 68% of electronics and parts seized originated from China.

$6,000,000,000
A Chinese factory producing 41,000 fake iPhone handsets worth around $19 million was shut down in 2015.

148 million (8%) of all mobile devices sold worldwide in 2013 were substandard or counterfeits.

Smart phones
Computers
Tablets
DVD/music players

2.5 MILLION
In 2015, 2.5 million consumers in the UK bought a fake electrical product online.

8%
of UK consumers said they would consider buying fakes to save money.

60%
Online retailers account for 60% of all fake electrical goods purchased in the UK.

7%
of UK consumers bought electronics via social media.

2X
UK consumers are now twice as likely to see counterfeits on sale as they were in 2015.
Know your enemy

Before any strategy can be implemented, make sure you’ve mapped out the current online environment. Ask yourselves these questions:

- Where is there online activity that affects your brand?
- Where are the biggest risks?
- Which risks are the most threatening to the business not attaining its goals?
- What are the potential quantitative losses from counterfeiting?
- What are people saying about your brand online and is it true?

Make it a team effort

Anti-counterfeiting is rarely a one-person job. Don’t leave it to a single department to sort out the issue. Just as counterfeiting affects multiple business areas, so does the solution:

- **IP professionals** – work to protect IP, including trademarks and copyright.
- **Marketers** – prevent brand erosion through safekeeping of the brand reputation, and direct customers to your legitimate products.
- **Risk professionals** – mitigate supply chain, financial, and consumer risk.

The CSC® online resource center provides insights and guides on the issues of anti-counterfeiting and online brand protection to help you. Find it at: cscdigitalbrand.services/en/resource-center
Educate your customers

Your customers could be a big asset in your fight against counterfeiting. Although there will always be consumers who will look for a cheaper alternative for the products they want, many customers also show strong brand loyalty. Make it easy for your people to find your genuine products:

• Publish online consumer help pages telling your customers what to look for to ensure they are getting a genuine product, as well as where they can find them.
  » What are the indicators of genuine products - include logos, 3D trademarks, colors, etc.
  » Give a list of official suppliers, and perhaps a list of places where you do not sell.
  » Highlight how many times per year your brand has an official sale and indicate the highest discount given to genuine products.
• Give customers an opportunity to report counterfeit goods.
  » Set up an easy web form on your customer services pages so that people can report what they have bought, from where, and for how much to help you identify counterfeit sites and suppliers.
• Consider investing in physical anti-counterfeiting technologies like the suggested protections below to help consumers validate products.

Get protected

Social media monitoring
Look for a social media and mobile app monitoring solution that tracks all mentions of brands and trademarks across social media platforms.

Anti-counterfeit and marketplace monitoring solution
A good marketplace monitoring and anti-counterfeiting solution will combine professional expertise, with cutting-edge technology, and analyst review to ensure data integrity before enforcement action begins.

Domain and content monitoring
You want a partner whose success rate for recovering digital assets, removing infringing content, and enforcing takedowns is exceptional.

Clients choose CSC for our first-class online Enforcement Team, our global reach, and the value of our complimentary, expert advice. We’re ready to talk. Contact us to learn more about how we can help consolidate, secure, and promote your brand online.
